

...

Why the audience laugh?

The audience laughed because Lisi made a **humorous** between the **serious topic of quantum mechanics** and the **cartoonish image displayed**, possibly a playful representation of **Schrödinger's cat scenario**. This unexpected, light-hearted shift in the presentation amused the audience, sparking laughter.

“the mathematics of quantum mechanics very accurately describes how our universe works”

“this quantum weirdness was first described by erwin and his cat”

“the cat likes this version better **(audience laughs)**”
